

The Division of Tumor Cell Biology at the University of Heidelberg, Department of Surgery, searches a

PhD

candidate with interest in tumor cell biology, particularly in the field of the crosstalk between pancreatic cancer stem cells, the stem cell niche and metastatic organs. Interest or experience in microscopy, cell signalling and vesicular traffic are wanted. The candidate also should be willing to get experience in animal experiments.

The grant is currently limited to 2 years, prolongation will be possible.

Candidates will become integrated in a dynamic and very friendly group with experience in a wide range of cell biology methods.

Please submit your application including CV, contact information of two references and a cover letter stating research and career interest. Additional information can be provided by
